INSPIRED: BEFORE & AFTER

Peregrine Design/Build

The Goal

Our homeowners raised their family in the rural Vermont suburbs and dreamed of one day living the “city” life. They found a place with sweeping views of Lake Champlain and the Adirondack Mountains beyond, but the dated interiors were not what they had in mind for their empty nest. They consulted with Peregrine Design/Build to upgrade the condominium to complement the spectacular views and their new lifestyle.

The Challenge

Building inside a high-rise had its own unique challenges. One of the trickier ones was bringing the quartz countertop slabs up to the eighth floor by crane. With the building located on the waterfront, there was always a high-wind potential, not to mention the heavily trafficked street.

The Must-Haves

A home office was a necessity, but the clients also requested a thirty-six-inch Wolf dual-fuel range, with a chimney-style hood. They had walnut cabinetry in their prior home and wanted to continue that look in the dining and kitchen areas with the custom-built pieces.
